

```
import java.net.*;

public class networking
{
    public static void main(String[] args) throws UnknownHostException
    {
        InetAddress obj1 = InetAddress.getByName("cisco.com");
        InetAddress obj2 = InetAddress.getByName("sanfoundry.com");
        boolean x = obj1.equals(obj2);
        System.out.print(x);
    }
}
```
